CERTIFICATE OF ATTAINMENT

This is to certify that

has attended and successfully completed the course assessment and examination for the

CYBERSECURITY, ETHICAL HACKING & PENETRATION TESTING PROFESSIONAL COURSE

The Cybersecurity, Ethical Hacking & Penetration Testing Professional Course is designed as a self-paced online course, delivered through structured, self-paced modules covering specified learning areas, to provide learners with comprehensive knowledge and practical competence in ethical hacking, penetration testing, reconnaissance, network scanning, vulnerability assessment, system security, malware analysis, network security, web application security, wireless security, mobile security, cloud security, IoT/OT security, and cryptography.

This certificate confirms successful completion of training and assessment in the principles and practical application of ethical hacking and penetration testing, including footprinting and enumeration, vulnerability analysis, system hacking concepts, malware threats, network sniffing, social engineering, DoS and DDoS attacks, session security, defensive architecture, web server and application security, SQL injection, wireless and mobile security, cloud and container security, and cryptographic security, with emphasis on authorized, ethical, and defensive cybersecurity practices.

Duration : **25 Hours**

Mode: **E-Learning, Video-based, Self-paced**

PROGRAM TRANSCRIPT

Name :

Overall Grade:

Training Program : CYBERSECURITY, ETHICAL HACKING & PENETRATION TESTING PROFESSIONAL COURSE

This transcript outlines the curriculum and assessments completed under the Cybersecurity, Ethical Hacking & Penetration Testing Professional Course, covering ethical hacking, reconnaissance, vulnerability assessment, system hacking, malware analysis, network security, social engineering, web and application security, wireless and mobile security, IoT/OT security, cloud security, and cryptography, with emphasis on practical cybersecurity assessment, penetration testing, and defensive security concepts.

Course Curriculum	Description
Introduction to Ethical Hacking	Learn ethical hacking fundamentals, modern cyber threats, hacking concepts, Cyber Kill Chain, MITRE ATT&CK, security controls, laws, and standards
Footprinting, Scanning & Enumeration	Understand reconnaissance, footprinting, network scanning, host and port discovery, and enumeration techniques used during authorized security assessments.
Vulnerability Analysis & System Hacking	Learn how vulnerabilities are identified, assessed, exploited in controlled environments, and how privilege escalation and access risks are evaluated.
Malware Threat Analysis	Explore malware types, APTs, viruses, worms, ransomware, fileless malware, and basic static and dynamic malware analysis.
Network Sniffing	Understand packet analysis, network sniffing, MAC attacks, protocol poisoning, and techniques used to protect network traffic.
Social Engineering	Learn how attackers manipulate people through phishing, vishing, smishing, physical attacks, and modern AI-enabled social engineering threats.
DoS & DDoS Attacks	Understand denial-of-service attacks, DDoS vectors, botnets, command-and-control systems, and defensive measures for maintaining availability.
Session Hijacking	Explore application and network-level session hijacking, session tokens, modern session threats, and methods for protecting authenticated sessions.
Defensive Architecture & Evasion	Learn defense-in-depth, firewall, IDS/IPS and WAF evasion concepts, honeypots, and techniques for strengthening security controls.
Web Server Security	Understand web server architecture, common misconfigurations, security testing tools, patch management, hardening, and monitoring.
Web Application & API Security	Explore OWASP risks, Broken Access Control, IDOR, XSS, command injection, web security testing, and API security weaknesses.
SQL Injection	Learn SQL injection concepts, in-band and blind SQL injection, automated testing approaches, and important database security countermeasures.
Wireless Network Security	Understand wireless architecture, encryption standards, WPA2 risks, rogue access points, Evil Twins, enterprise Wi-Fi, and WPS security.
Mobile Application Security	Learn mobile architecture, sandboxing, static and dynamic analysis, reverse-engineering concepts, and common mobile application security threats.
IoT, OT, Hardware & Radio Security	Explore IoT and OT security, hardware interfaces, radio communication risks, device vulnerabilities, and security controls for connected systems.
Cloud, Containers & Kubernetes Security	Understand cloud security, IAM risks, storage and compute attacks, shared responsibility, containers, Kubernetes, and common cloud misconfigurations.
Cryptography & PKI	Learn encoding, hashing, encryption, symmetric and asymmetric cryptography, Public Key Infrastructure, digital certificates, and common cryptographic attacks.

This transcript forms an integral part of the Certificate of Attainment and must be read in conjunction with it.
