SUSTAINABLE FUTURES TRAININGS

CERTIFICATE OF ATTAINMENT

This is to certify that

has attended and successfully completed the course assessment and examination for the

ISO 14064
GHG LEAD ACCOUNTANT COURSE

ISO 14064 GHG Lead Accountant Course is designed as a self-paced online course, delivered through structured modules covering the specified learning areas, to provide learners with comprehensive knowledge and practical competence in greenhouse gas (GHG) accounting, organisational GHG inventory preparation, emission data management, quantification, reporting, GHG reduction activities, project-level accounting, and climate-related programmes and initiatives.

This certificate demonstrates successful completion of the prescribed training and assessment requirements for competence in the preparation, management, quantification, monitoring, documentation, and reporting of organisational GHG information in accordance with the principles and requirements of ISO 14064-1 and relevant provisions of the ISO 14064 family of standards. The training and assessment emphasise GHG inventory development, organisational boundaries, emission source identification, activity data management, emission factors, CO_2e calculations, data quality, evidence trails, uncertainty considerations, GHG mitigation activities, project-level GHG accounting, and applicable climate and sustainability reporting requirements.

The course further develops the learner's ability to maintain reliable and traceable GHG accounting records, support accurate emission calculations, prepare GHG inventory information, monitor emission reduction activities, and contribute effectively to organisational climate and sustainability reporting.

Duration : **3 Hours**

Mode: **E-Learning, Video-based, Self-paced**

PROGRAM TRANSCRIPT

Name :

Overall Grade:

Training Program ISO 14064 GHG LEAD ACCOUNTANT TRAINING COURSE

This transcript documents the curriculum and assessment requirements successfully completed by the participant as part of the ISO 14064 GHG Lead Accountant Training Course, covering GHG accounting principles, organizational GHG inventory preparation, quantification and reporting, GHG data management, project-level GHG concepts, applicable GHG programmes and climate policy frameworks, and practical GHG accounting exercises, aligned with the relevant requirements and principles of the ISO 14064 series.

Course Curriculum	Description
Climate Change & GHG Accounting Basics	Understand climate change, GHGs and the fundamentals of carbon accounting
Sustainability Frameworks & Reporting Standards	Explore key sustainability, GHG and ESG reporting frameworks.
Sectoral Standards & GHG Practices	Learn sector-specific GHG requirements, practices and reporting approaches.
ISO 14060 Standards & GHG Frameworks	Understand the ISO 14060 family and its role in GHG management.
ISO 14064-1 GHG Inventory Fundamentals	Build a strong foundation in organization-level GHG inventory preparation.
GHG Quantification & Reporting	Learn to quantify, document and report organizational emissions accurately.
GHG Accounting Key Terms	Master essential terminology used in GHG accounting and reporting.
GHG Quantification Methods	Apply activity data, emission factors and GWP-based calculation methods.
GHG Mitigation & Reduction Activities	Understand emission reduction initiatives, targets and mitigation actions.
GHG Quality & Reporting	Strengthen data quality, uncertainty management, documentation and reporting practices.
GHG Projects & Baselines	Understand project-level GHG reductions, baselines and monitoring concepts.
GHG Programmes & Indian Initiatives	Explore major GHG programmes, carbon initiatives and Indian frameworks.
India Climate Policy & NAPCC	Understand India's national climate missions and policy framework.
Indian Environmental Policies & Reporting	Explore key environmental regulations, ESG disclosure and reporting initiatives.
Carbon Markets & GHG Claims	Understand carbon markets, credits, certificates and credible GHG claims.
GHG Inventory Workshop	Practise organizational boundaries, source identification and GHG calculations.
Cement Plant GHG Case Study	Apply GHG accounting concepts to a realistic industrial case study.
GHG Risk Assessment & Planning	Learn to identify data risks and develop effective GHG accounting plans.

This transcript forms an integral part of the Certificate of Attainment and must be read in conjunction with it.
