SUSTAINABLE FUTURES TRAININGS

CERTIFICATE OF ATTAINMENT

This is to certify that

has attended and successfully completed the course assessment and examination for the

ISO 14064:2018
GHG LEAD VERIFIER COURSE

ISO 14064 GHG Lead Verifier Course is designed as a self-paced online course, delivered through listed, structured, self-paced modules of the specified learning areas, to provide learners with comprehensive knowledge and practical competence in greenhouse gas (GHG) quantification, reporting, validation, and verification in accordance with the ISO 14064 series.

This certificate fulfills the requirements for qualification as a GHG Lead Verifier. Training and assessment were conducted in accordance with the principles and requirements of ISO 14064-1:2018 (GHG quantification and reporting at organisational level), ISO 14064-2:2019 (GHG project quantification, monitoring and reporting), and ISO 14064-3:2019 (Specification with guidance for the verification and validation of greenhouse gas statements), aligned with the verification principles outlined in the ISO 14060 series.

Duration : **7 Hours**

Mode: **E-Learning, Video-based, Self-paced**

PROGRAM TRANSCRIPT

Name :

Overall Grade:

Training Program : ISO 14064:2018 GHG LEAD VERIFIER COURSE

This transcript outlines the structured curriculum, learning modules, and assessments successfully completed under the ISO 14064 GHG Lead Verifier Training Programme, covering greenhouse gas (GHG) quantification, monitoring, reporting, validation, and verification in accordance with ISO 14064-1:2018, ISO 14064-2:2019, and ISO 14064-3:2019, aligned with the applicable principles of the ISO 14060 family of standards and relevant GHG verification competency requirements.

Course Curriculum	Description
Course Overview	Introduces climate science, policy, ISO 14064, and evidence-based GHG verification.
Climate Change, GHGs & the Need for Standards	Explores sustainability standards, disclosure frameworks, evidence, criteria, and credible GHG verification.
Sector-Specific Sustainability Standards and Verification Risks	Explores sector-specific emission risks, evidence, sampling, standards, and verification criteria.
The ISO 14060 Family and GHG Standards Architecture	Explains ISO 14060 standards, claim types, programme rules, and verifier competence.
Principles of GHG Reporting	Explains key GHG reporting principles, risks, evidence testing, and verification conclusions.
GHG Inventory Boundaries	Explains organisational and reporting boundaries, consolidation approaches, categories, and verification risks.
Key Terms and Definitions in GHG Validation and Verification	Defines essential GHG terminology, data types, baselines, roles, validation, and verification
Quantification of GHG Emissions and Removals	Explains GHG quantification methods, data, calculations, base years, and electricity claims.
GHG Mitigation Activities GHG Reduction Initiatives, Project Claims, Offsets and Targets	Explains GHG initiatives, projects, offsets, targets, evidence, and verification risks.
GHG Inventory Quality Management, Evidence Trails and Reporting	Explains inventory quality controls, evidence trails, uncertainty, reporting, and verification reliability.
GHG Projects, Baselines, Monitoring and Project-Level Reporting	Explains GHG projects, baselines, monitoring, reductions, leakage, reporting, and verification.
Verification, Validation and Engagement Selection	Explains verification, validation, engagement selection, assurance, criteria, and programme requirements.
Validation and Verification Principles	Explains impartiality, evidence, fair presentation, documentation, conservativeness, and defensible assurance conclusions.
Materiality, Uncertainty, Assurance Levels and Data Testing	Explains materiality, uncertainty, assurance levels, data testing, and professional judgement.
Validation and Verification Process Flow	Explains complete validation and verification processes, evidence gathering, review, reporting, and independence.
Risk Assessment and Risk-Based Verification Planning	Explains verification risks, controls, professional scepticism, sampling, and risk-based planning.
Evidence-Gathering Activities in Validation and Verification	Explains evidence-gathering methods, sufficiency, appropriateness, risk alignment, and defensible assurance conclusions.
Testing Techniques and Risk-Based Sampling	Explains testing techniques, risk-based sampling, assurance levels, controls, and evidence sufficiency
Communication of Findings, Evidence Gaps and Escalation	Explains communicating findings, evidence gaps, escalation, documentation, and assurance conclusion impacts
Verification Opinions and Assurance Conclusions	Explains verification opinions, materiality, pervasiveness, evidence limitations, and defensible assurance conclusions
Contents and Structure of a Verification Report	Explains verification report structure, scope, criteria, findings, limitations, opinions, and sign-off
Contents and Structure of a Validation Report	Explains validation report structure, future-oriented claims, evidence, limitations, opinions, and approvals
Comparing Verification and Validation Reports and Independent Review	Compares verification and validation reports, testing approaches, criteria, and independent review
Competence Requirements for GHG Validation and Verification Teams	Explains competence requirements, team capabilities, sector expertise, ethics, and professional judgement
GHG Programmes, Programme Rules and Indian Examples	Explains GHG programmes, rules, Indian examples, eligibility, evidence, and verification planning
India's National Action Plan on Climate Change and Its Eight Missions	Explains India's NAPCC, eight missions, policy context, claims, and verification criteria
India's Environmental Policy Initiatives and Their Relevance to GHG Verification	Explains Indian environmental initiatives, GHG claims, evidence, programme rules, and verification criteria
Carbon Market Instruments, Trading Systems, and Evidence Discipline	Explains carbon market instruments, trading systems, evidence requirements, and double-counting risks
GHG Verification Planning, Risk Assessment and Evidence Strategy	Explains verification planning, risk assessment, evidence strategy, sampling, responsibilities, and communication
GHG Verification Execution: Evidence Evaluation, Testing, Findings and Professional Judgement	Explains verification execution, evidence testing, findings, corrective actions, and professional judgement
Risk-Based Verification Planning, Sampling and Evidence Strategy	Explains risk-based planning, sampling, evidence strategies, team roles, and professional judgement

This transcript forms an integral part of the Certificate of Attainment and must be read in conjunction with it.
