CERTIFICATE OF ATTAINMENT

This is to certify that

has attended and successfully completed the course assessment and examination for the

DIPLOMA IN CYBERSECURITY & ETHICAL HACKING (FOUNDATIONS)

The program covered foundational principles and practices of Cybersecurity and Ethical Hacking, including information security concepts, CIA Triad, cyber threats, attacker methodologies, MITRE ATT&CK, Cyber Kill Chain, threat modeling, ethical hacking phases, information security governance, and relevant cybersecurity standards and regulatory concepts.

The participant has demonstrated foundational knowledge of identifying cyber risks, understanding attack vectors, evaluating vulnerabilities, and applying ethical hacking concepts within a legal and responsible cybersecurity environment.

Duration : **2 Hours**

Mode: **Online/Tutor Led**

PROGRAM TRANSCRIPT

Name :

Overall Grade:

Training Program :DIPLOMA IN CYBERSECURITY & ETHICAL HACKING(FOUNDATIONS)

This transcript documents the curriculum and assessment components completed by the participant as part of the Diploma in Cybersecurity & Ethical Hacking (Foundations) program. The 2 hour training provides foundational knowledge of cybersecurity principles, ethical hacking methodologies, cyber threats, attack frameworks, security governance, threat modeling, and global information security standards, aligned with internationally recognized cybersecurity best practices and industry frameworks.

Course Curriculum	Description
Introduction to Ethical Hacking	This module introduces learners to the fundamentals of ethical hacking and information security, including the CIA Triad, non-repudiation, key cybersecurity terms, attacker motivations, common threats, attack vectors, and real-world cyber incidents. Learners gain a strong foundation in understanding cyber risks, attacker behavior, and basic defensive strategies.
The Modern Threat Landscape	This module explains the modern cyber threat landscape, covering mobile security risks, insider threats, botnets, DDoS attacks, network-level threats, host-level attacks, application vulnerabilities, and operating system weaknesses. Learners understand how attackers exploit digital systems and how organizations identify, prevent, and respond to evolving cybersecurity threats.
Information Warfare, Cyber kill chain & MITRE ATTACK Framework	This module introduces information warfare and the early stages of the cyber-attack lifecycle using the Cyber Kill Chain and MITRE ATT&CK frameworks. Learners understand reconnaissance, weaponization, and delivery techniques, including intelligence gathering, malware preparation, phishing, infected media, and exploitation methods used by attackers before system compromise.
Hacking concepts & information Security Controls, Laws and Standards	This module explains hacking concepts, attacker behavior, and ethical hacking methodologies using the MITRE ATT&CK Framework. Learners explore hacker types, hacking phases, ethical hacking processes, information security controls, governance practices, and threat modeling techniques to understand how vulnerabilities are identified, exploited, assessed, and controlled in a legal cybersecurity environment.
Information Security Laws and Standards	This module covers threat modeling, information security laws, and global compliance standards for cybersecurity governance. Learners understand how organizations identify risks, protect sensitive data, and comply with frameworks and regulations such as PCI-DSS, ISO/IEC 27001, HIPAA, SOX, GDPR, DMCA, FISMA, and CCPA.

This transcript forms an integral part of the Certificate of Attainment and must be read in conjunction with it.
