CERTIFICATE OF ATTAINMENT

This is to certify that

has attended and successfully completed the course assessment and examination for the

ISO 14971:2019- APPLICATION OF RISK MANAGEMENT TO MEDICAL DEVICES

This certificate is proudly awarded in recognition of the participant's successful completion of the ISO 14971:2019 – Application of Risk Management to Medical Devices course. Through dedicated study and active participation, the recipient has demonstrated a comprehensive understanding of internationally recognized medical device risk management principles and practices. This includes proficiency in risk management planning, hazard identification, risk analysis and evaluation, implementation of risk control measures, assessment of residual risks, post-market surveillance activities, and continuous lifecycle-based risk review, all in accordance with the requirements and guidance established by ISO 14971:2019. The successful completion of this course reflects the participant's commitment to maintaining the highest standards of quality, safety, and regulatory compliance in the development and management of medical devices.

Duration : **2 Hours**

Training Program : ISO 14971:2019- APPLICATION OF RISK MANAGEMENT TO MEDICAL DEVICES

This transcript confirms that the participant has successfully completed the ISO 14971:2019 course on the application of risk management to medical devices. The course provided practical understanding of risk management planning, hazard identification, risk assessment, risk control, residual risk evaluation, post-market surveillance, and ongoing risk management review. The participant has demonstrated knowledge of applying ISO 14971 principles to support medical device safety, regulatory compliance, and lifecycle-based risk management.

Course Curriculum	Description
ISO 14971:2019 – Application of Risk Management to Medical Devices	This transcript confirms that the participant has successfully completed the ISO 14971:2019 course on the application of risk management to medical devices. The course covered practical risk management principles, including risk planning, hazard identification, risk analysis, risk control, benefit-risk evaluation, post-market surveillance, and maintenance of the risk management file, with a focus on real-world medical device applications.
ISO 14971: Mastering Medical Device Risk Management	This section introduces ISO 14971 as the key international standard for medical device risk management, presented through a practical and real-world learning approach. Using the Dentcare Innovations case study, learners explore the importance of risk management in ensuring patient safety, meeting regulatory expectations, and building business confidence. The module explains the lifecycle-based risk management process, the purpose of a Risk Management Plan, and the role of systematic hazard identification as the foundation for developing safe, effective, and compliant medical devices.
Risk Assessment Methods and Techniques	This module covers practical ISO 14971 risk assessment methods using the Safe Health Medical case study. Learners apply FMEA and Risk Priority Numbers (RPN) to identify, prioritize, and justify risks while supporting patient safety, regulatory compliance, and effective documentation.
Risk Control and Mitigation Strategies	This module covers ISO 14971 risk control, focusing on reducing harm through design, engineering controls, and validated safeguards. Using the Surgical Devices Corp case study, learners explore the risk control hierarchy, appropriate control measures, and the importance of design-based solutions. The module also highlights documentation, verification, validation, residual risk justification, and the ongoing role of risk control throughout the product lifecycle.
Post-Market Surveillance and Risk Management Review	This module covers post-market surveillance as an extension of ISO 14971 risk management, focusing on maintaining medical device safety and performance after launch. Using dental implants and the Dentcare Innovations case study, learners explore MDR requirements, data sources, and how post-market data supports ongoing risk assessment, regulatory compliance, and product improvement.

This transcript forms an integral part of the Certificate of Attainment and must be read in conjunction with it.
